

pyLDpred2 vs bigsnpr — realistic LD (coalescent), N=100k, h<sup>2</sup>=0.5

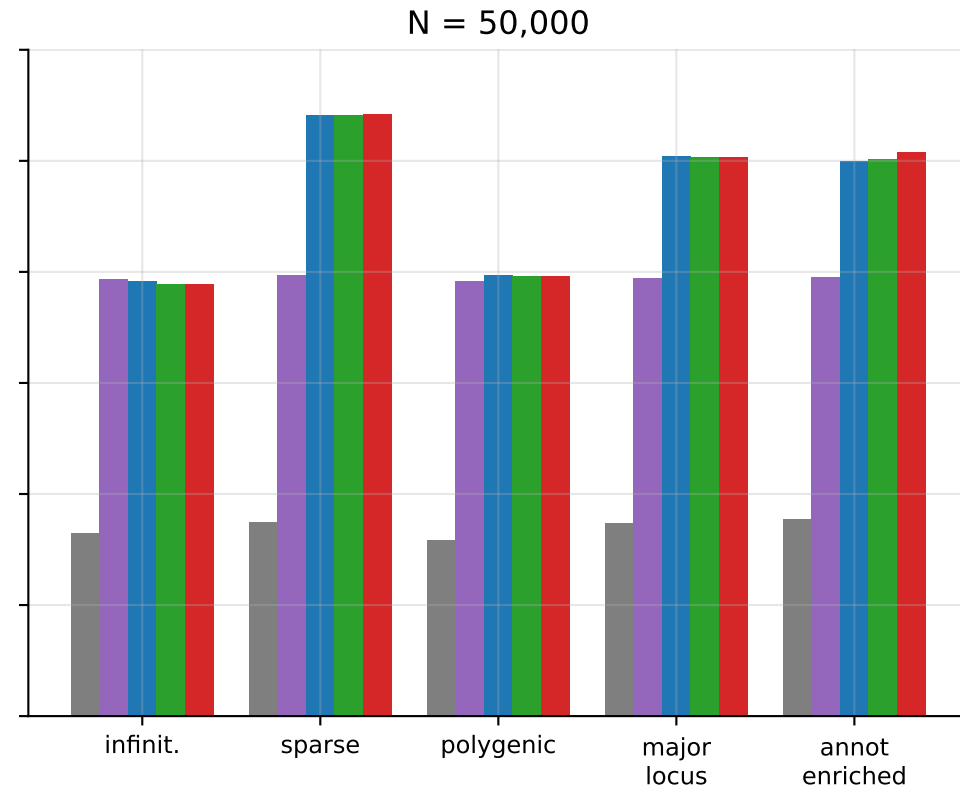

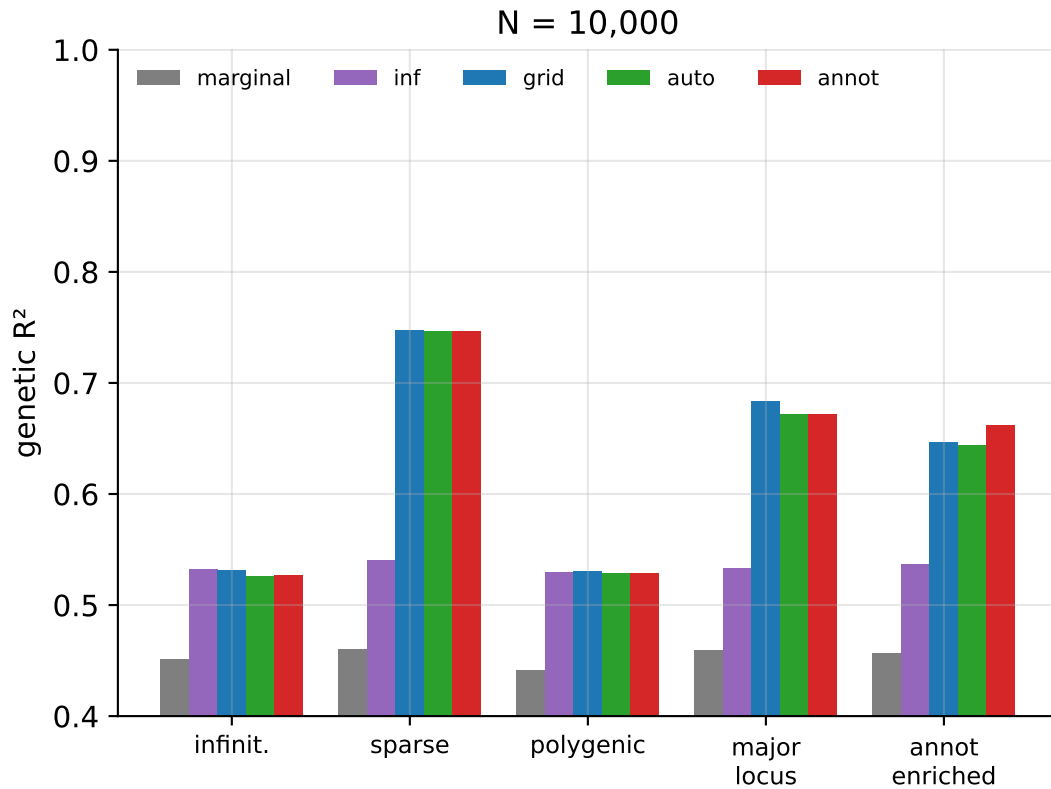

Running time, 1 core

Peak memory

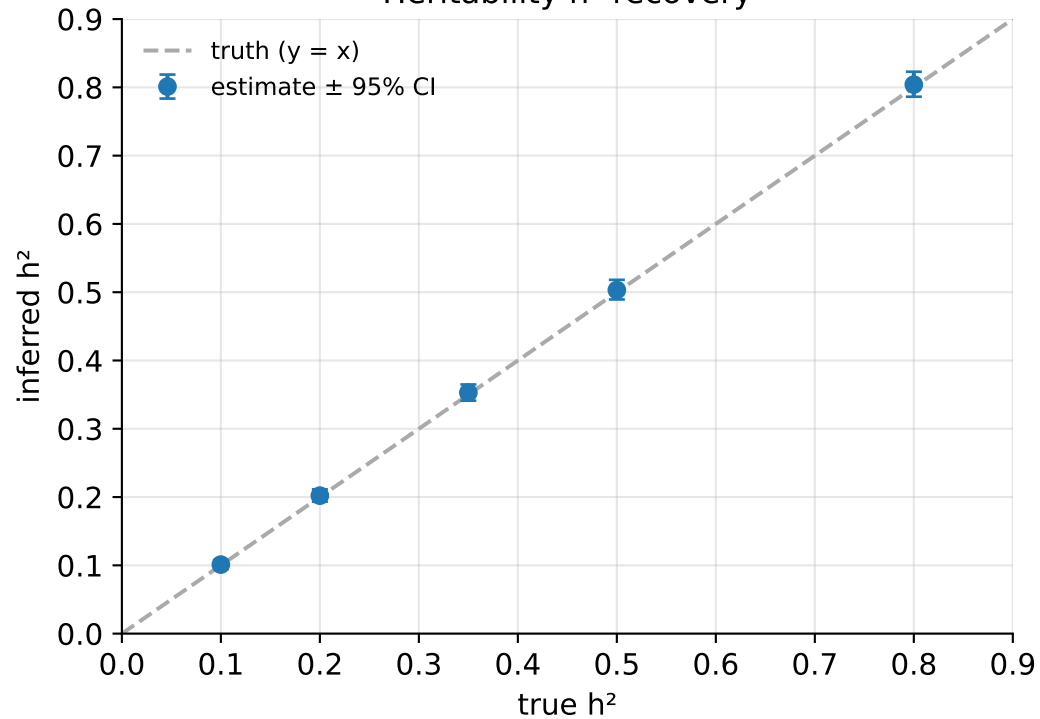

# Accuracy by genetic architecture (realistic LD, $h^2=0.5$ )

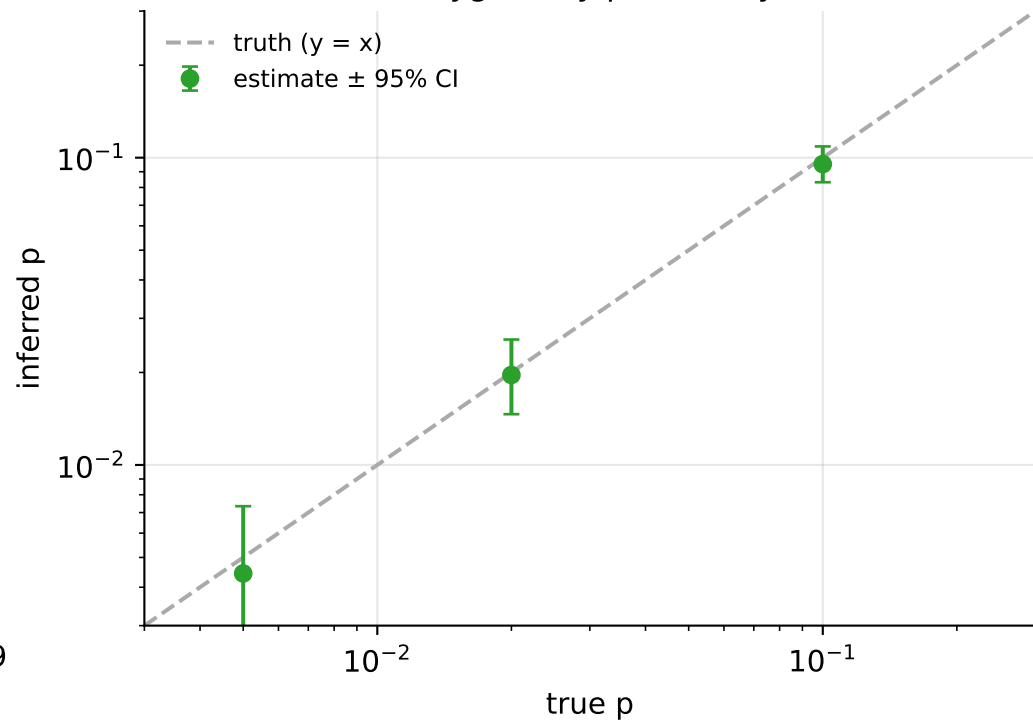

# Inference evaluation (LDpred2-auto-infer, no validation cohort)

## Heritability $h^2$ recovery

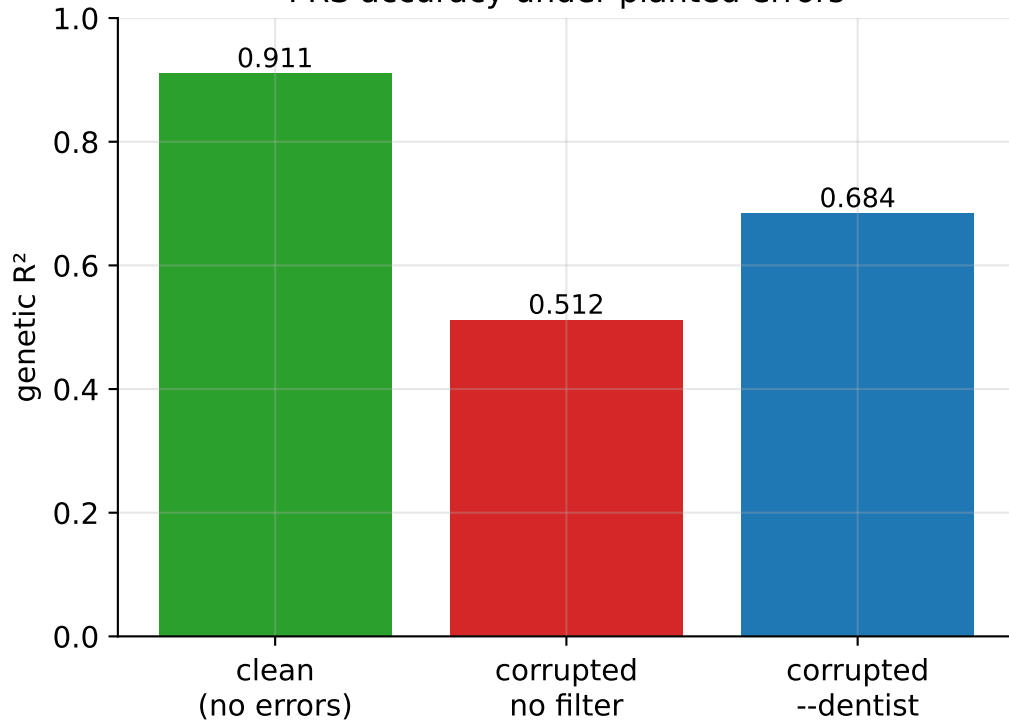

## Polygenicity $p$ recovery

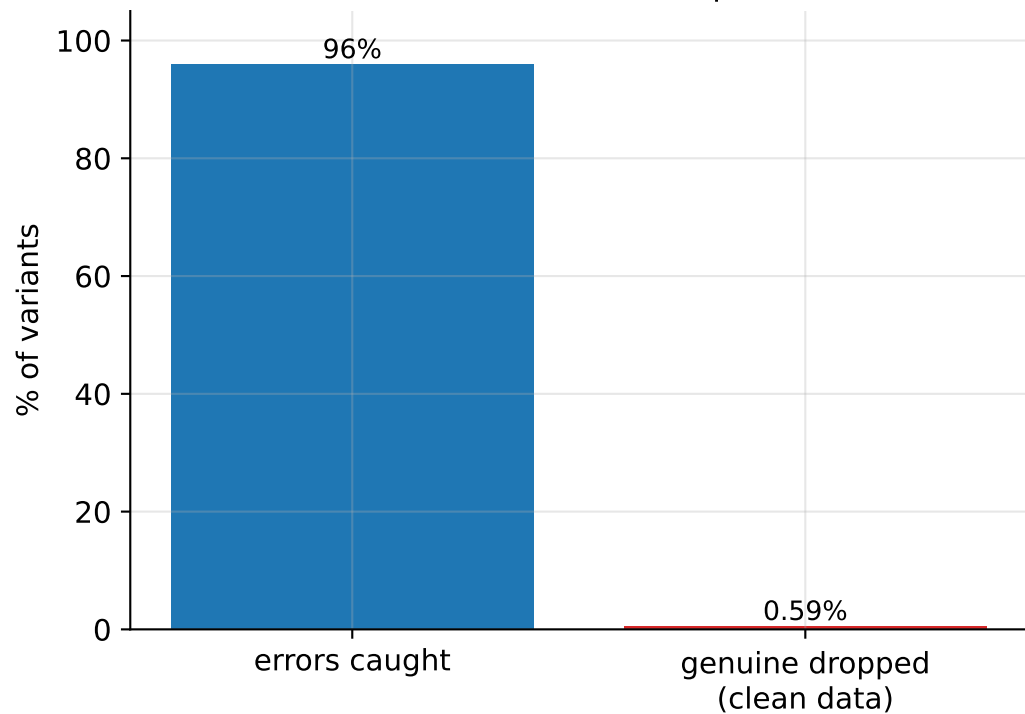

## DENTIST LD-consistency filter (--dentist)

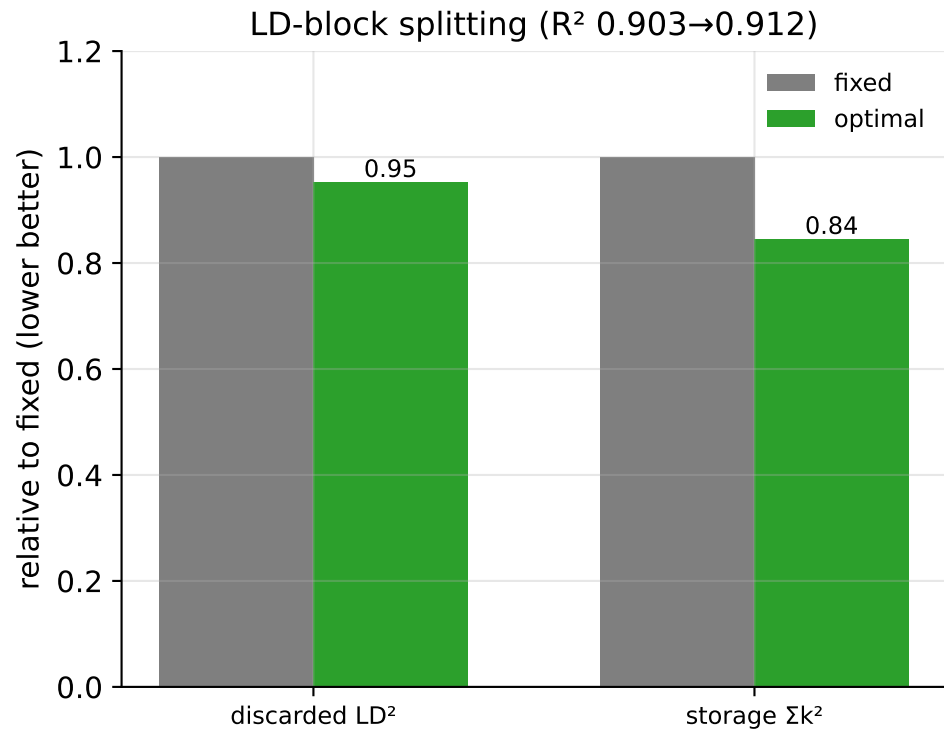

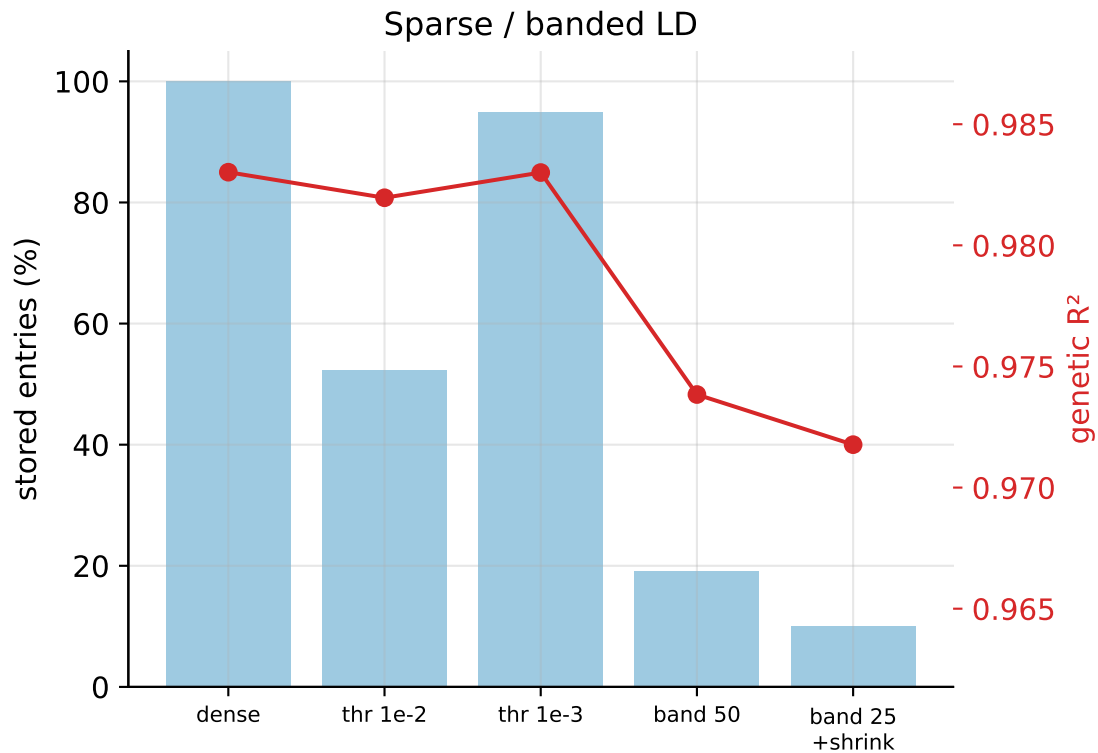

### PRS accuracy under planted errors

### Catch rate vs false-drop cost

## LD representation: storage vs accuracy

## Performance
