

LDpred3 vs bigsnpr — realistic LD (coalescent), N=100k, $h^2=0.5$

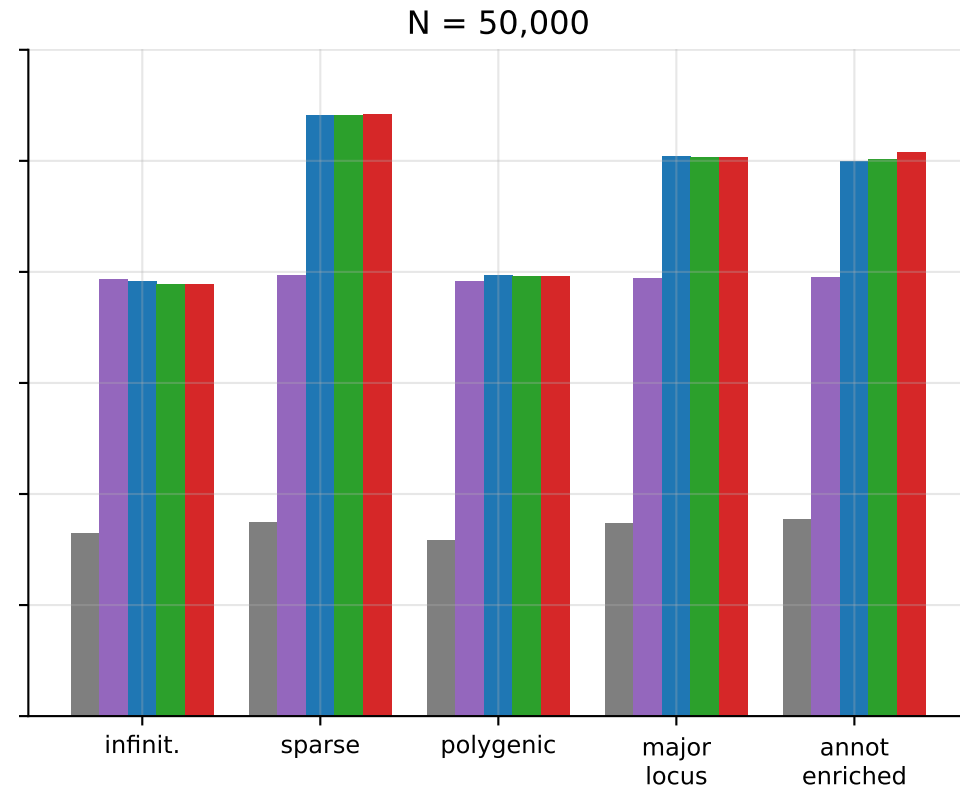

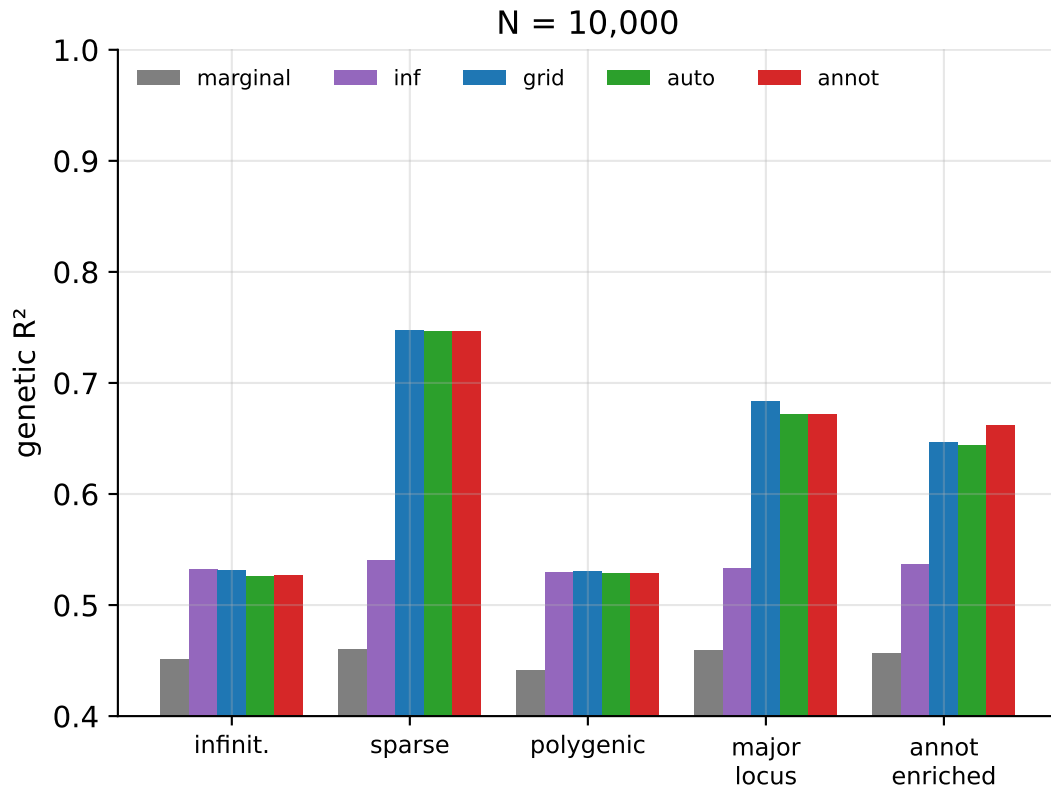

Running time, 1 core

Peak memory

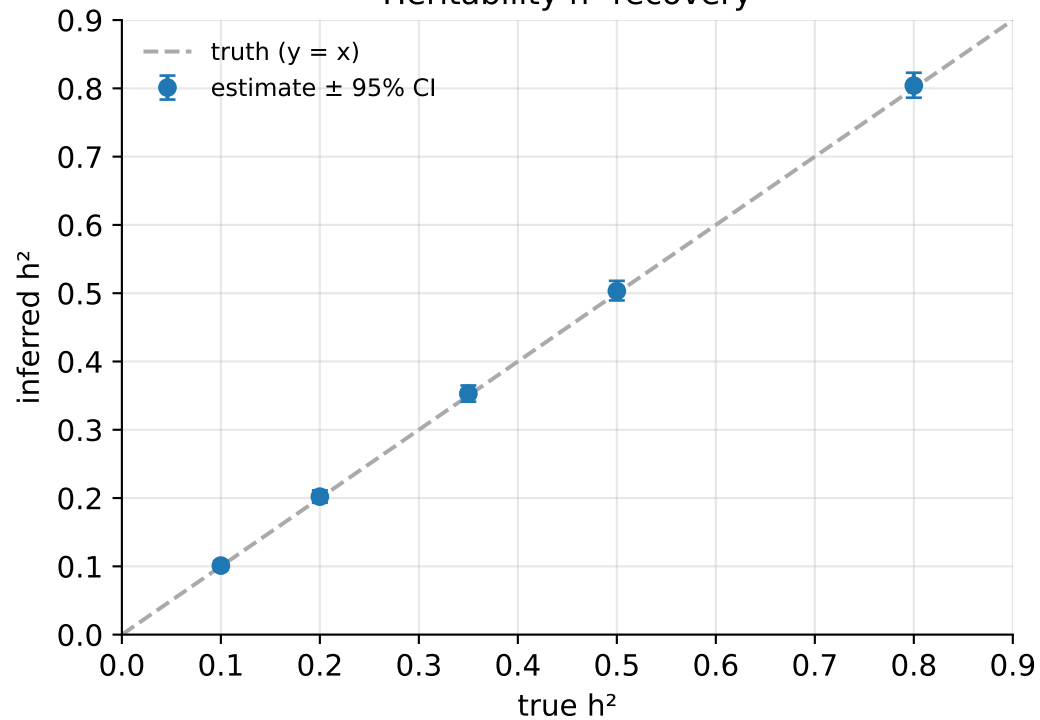

Accuracy by genetic architecture (realistic LD, $h^2=0.5$)

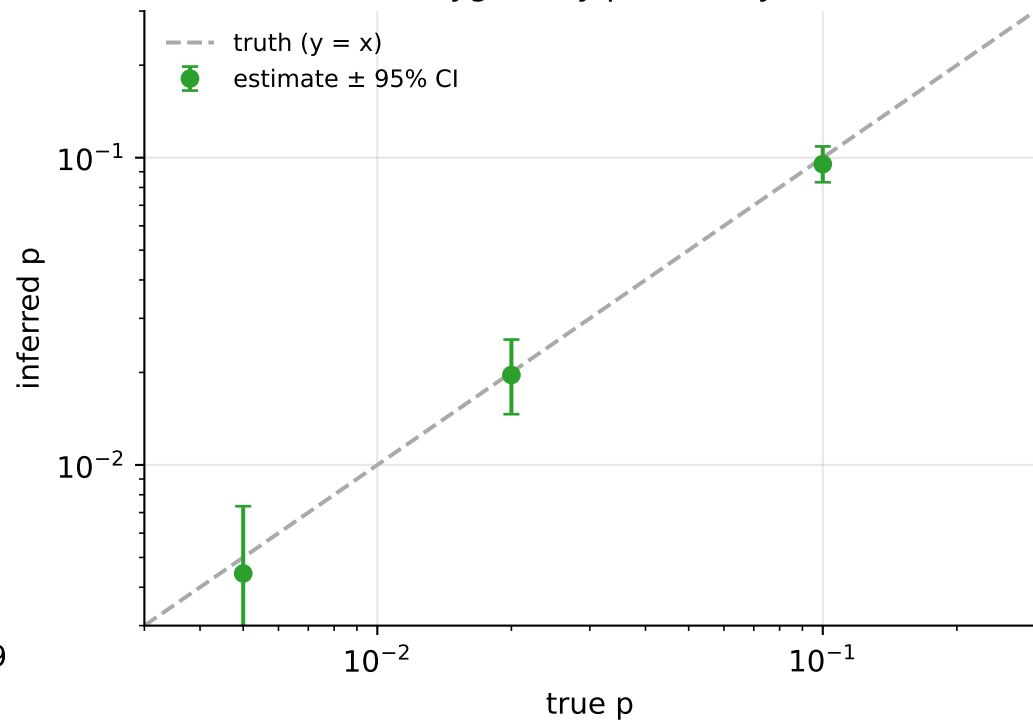

Inference evaluation (LDpred3-auto-infer, no validation cohort)

Heritability h^2 recovery

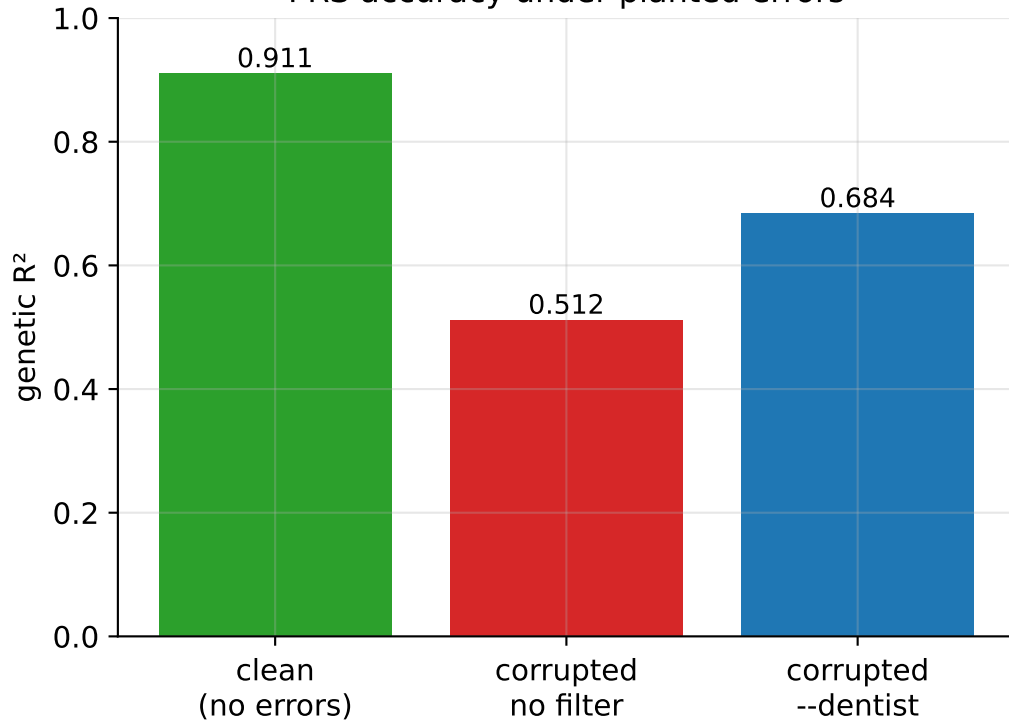

Polygenicity p recovery

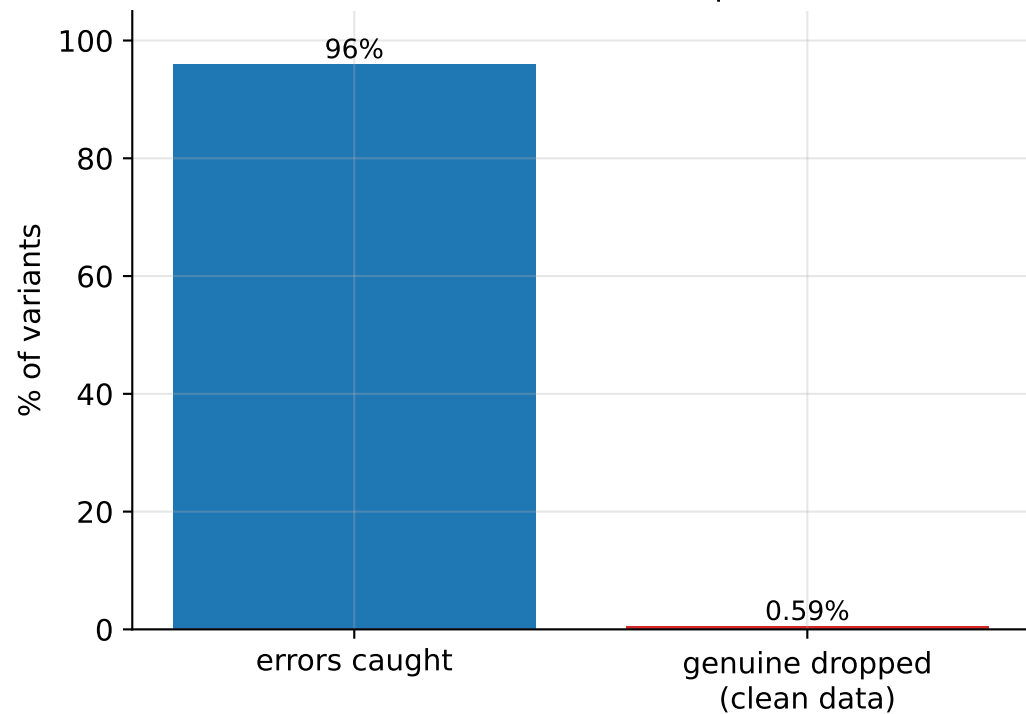

DENTIST LD-consistency filter (--dentist)

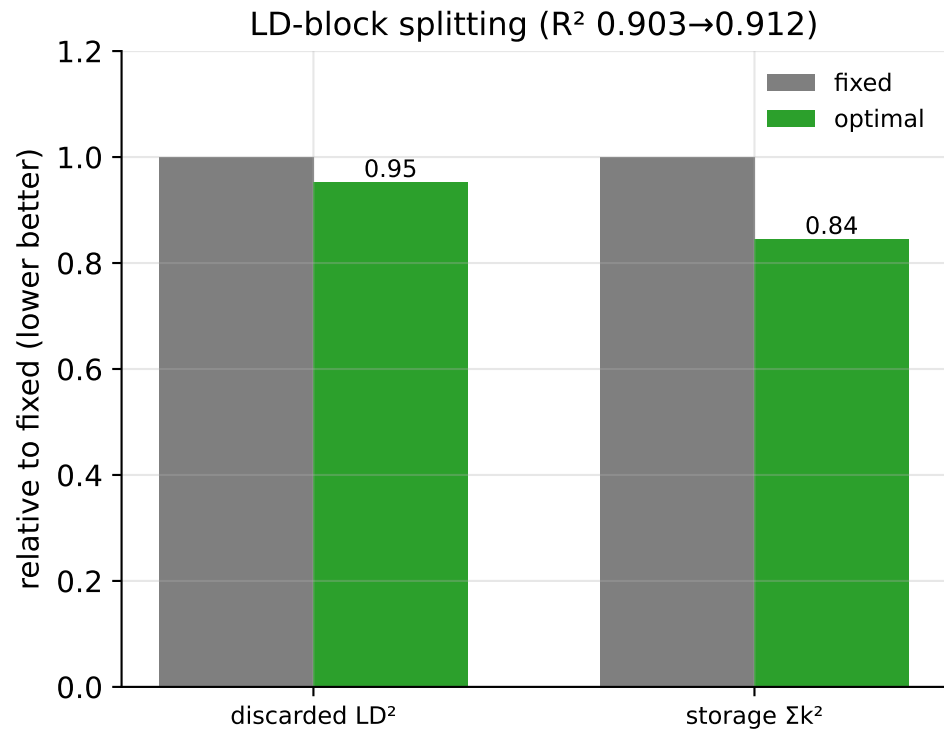

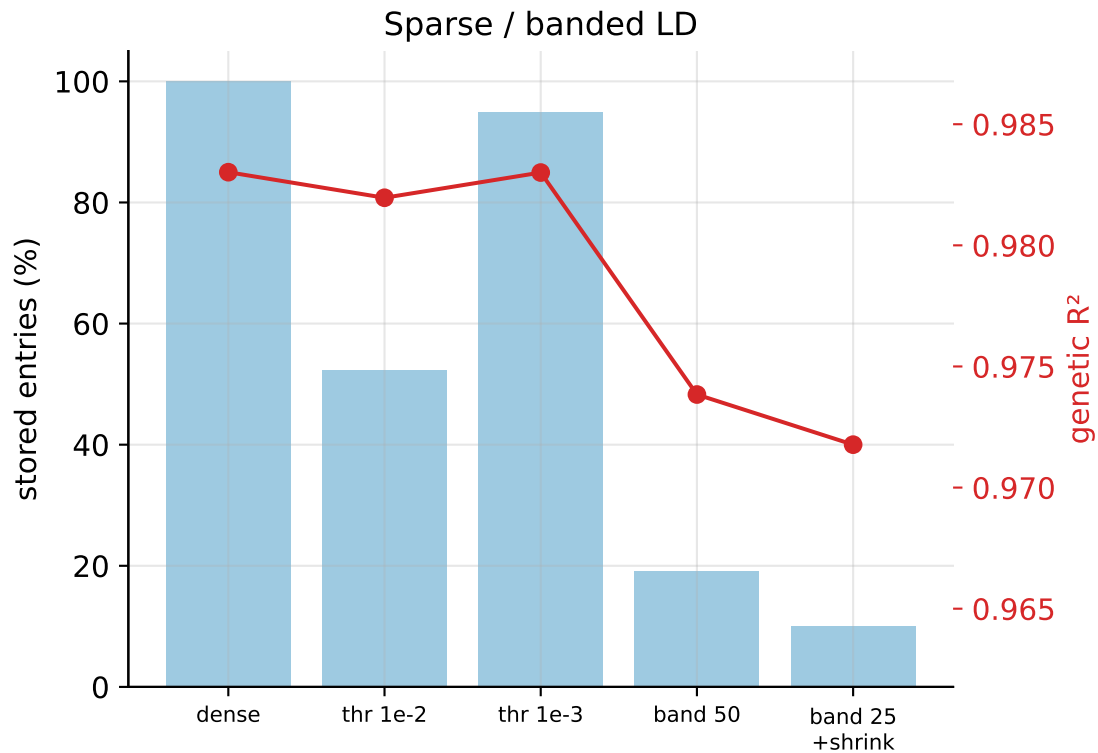

PRS accuracy under planted errors

Catch rate vs false-drop cost

LD representation: storage vs accuracy

Performance
